DETAILED ACTION

Drawings

1. New corrected drawings are required in this application because figures 3b,5, and 10 are not clear enough...text, waveforms, and elements difficult to read. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claims 1-6,8, 13,15,16-19,27,30,31,34,43,45,46,47,48, 54,57,58,59,61,63,66,68,69,70,71,72,73 are rejected under 35 U.S.C. 102(e) as being anticipated by Nicholls et al(US 6,429,748).

Art Unit: 2817

The reference by Nicholls et al discloses a symmetrical oscillator(see figures 7a,b) with first and second active elements(50, bipolar NPN) with drive terminals(base) and gain terminals(collector,emitter). A reactive element (304)coupled to the gain terminals with an additional inductor(306) coupled to a reference point is shown(also, note another reactive element, with inherent inductance, is shown(92)). Feedback is by way of shunt elements(58) and an output is shown (S(osc1)). First and second capacitors are shown(64).

Allowable Subject Matter

4. Claims 7,9-12,14,20-26,28,29,32,33,35-42,44,49-53,55,56,60,62,64,65,67, and 74-79 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
